Glossary

Capacitive Touch

Projected Capacitive is one of the leading touch technologies available and is widely utilized by mobile devices such as smartphones and tablets, offering a highly accurate and ultra-responsive touch experience. Supports up to 10 simultaneous touches on screen.

DisplayPort (DP)

The latest standard for rapid transmission of data, DisplayPort delivers the best refresh rate, highest resolution and incredibly rich colors.

Eco-mode

ViewSonic's proprietary Eco-mode function is built into all LED displays, offering options to "Optimize" or "Conserve". Both modes reduce display brightness and conserve up to 30%* energy. With Eco-mode, lamp replacement expenditures are reduced while practicing eco-friendliness.

ENERGY STAR®

ENERGY STAR is a government-backed program that helps businesses and individuals save money and protect our climate through superior energy efficiency. By choosing ENERGY STAR certified products such as monitors and displays, businesses can save on energy costs while reducing greenhouse gases.

EPEAT (Gold/Silver)

EPEAT® is a comprehensive environmental rating that helps identify greener computers and other electronic equipment. EPEAT Silver products meet all required environmental criteria plus at least 50% of optional criteria. EPEAT Gold products meet all required environmental criteria plus at least 75% of optional criteria.

Ergonomics

Ergonomic monitor features allow users to reduce eyestrain and physical fatigue by adjusting the monitor to create the most comfortable viewing angle. Many ViewSonic VG and VP display models offer height adjust, pivot, and tilt features for increased ergonomics.

LED

LED backlighting enhances display performance, delivers an outstanding color range, and adjusts contrast ratios for remarkably detailed images. The LED backlighting further conserves up to 25%* more energy when compared to conventional displays.

Optical Touch

Optical touch utilizes two or more image sensors that are usually placed around the edges of a display. Unlike Projected Capacitive touch, however, optical touch does not require a conductive object for touch recognition, making it ideal for gloved environments such as hospitals and dental offices or with a stylus.

RoHS

RoHS (Restriction of Use of Hazardous Substances) regulations limit or ban specific harmful substances (such as lead, cadmium, and mercury) in new electronic and electric equipment. ViewSonic monitors are compliant with RoHS regulations.

SuperClear™ IPS

IPS (In-Plane Switching) panels eliminate image distortion and color shifting, even at extreme angles up to 178° horizontal and vertical.

SuperClear™ VA

VA (Vertical Alignment) panels delivers superior image quality, accurate colors, and high contrast ratio even at super wide viewing angles of 178°.

TAA Compliance

Compliant with the Trade Agreement Act (TAA), our broad line of products are ideal for use in government, educational and corporate environments. TAA-compliant monitors support GSA Schedule needs within the Federal Government.

Warranty / Pixel Policy

ViewSonic is committed to using the highest grade panels and offers the industry's leading pixel performance policy. We also back our displays with a 3-year limited warranty for your peace of mind.
