

Reduce Digital Signage Hassles with Turnkey Integrated Media Player Solution

Challenge

Deploying and maintaining digital signs plus external media players increases install time and management hassles. Is there a more streamlined way to deliver digital signage?

Solution

Complete with a fully integrated media player, ViewSonic® CDM Series Large Format Displays deliver an all-in-one, turnkey signage solution. Deploy directly out-of-the box with simple set up, content loading and playback – all without the need of an external PC/media player and without the hassles of wires, additional software or LAN set up.

With functionality equal to or better than any integrated signage solution on the market, every ViewSonic CDM Series display includes integrated ViewSonic Signage Manager software and Smart Scheduler for easy content loading, playlist design and scheduling. The embedded internet browser offers easy delivery of web content. And while network connectivity isn't necessary for full operation, the embedded LAN/WiFi capabilities make it easy to connect and stream content from your network.

Ruggedized for incredibly durable and reliable 24/7 commercial operation, ViewSonic CDM Series displays are ideal for any public display application, including those with high ambient light. With a slim, attractive design, narrow bezel, landscape/portrait operation and easy tiling and daisy-chain functionality, CDM Series displays bring added ease and cost-savings to virtually any type of installation – from single displays to video walls.

What you'll need for streamlined, out-of-the-box digital signage:

▶ **A ViewSonic 43", 49", or 55" CDM Series Large Format Display, featuring:**
