CITY OF GLASGOW COLLEGE

**ViewSonic ViewBoards Take the City of Glasgow
College Visual Learning Lab to the Next Level**

Summary

ViewSonic joined forces with Intel to create a foolproof hybrid and remote learning solution that fits the needs of the City of Glasgow College Visual Learning Lab.

This initiative connects the industry-leading ViewSonic ViewBoards and myViewBoard software solutions with well-established technologies. Together, they bring into existence an extended canvas that enables students to learn in unseen new ways.

Equipped with slot-in OPS PCs, the interactive displays have been opening new horizons of digital applications such as computer vision, machine learning, and data insights that can be applied in and outside the classroom to benefit both staff and students.

These innovative solutions designed for the Visual Learning Lab empowered the teachers of the City of Glasgow College to reimagine and develop novel approaches to teaching and learning. The technologies support the latest pedagogies with inclusive, immersive, and inspiring collaboration opportunities on and off campus.
