

ViewSonic implements a complete learning ecosystem at **Rev. Piotr Skarga Primary School**

"The modern multimedia equipment makes it much easier to stimulate the younger children's interest in the topics discussed"

Anna Skłodowska
Deputy Principal of the School

Challenge

- Accommodating 13 classrooms with a durable educational ecosystem
- Limited hybrid and remote teaching
- Staff not familiar with new technologies

[Go to Challenge >](#)

Solution

- 13 ViewSonic IFP6550-3 ViewBoard 55" 4K
- myViewBoard software
- Complete training for teachers

[Go to Solution >](#)

Results

- Improved focus and higher student engagement
- Fully operational remote and hybrid learning
- Teachers and students quickly adapted to using hardware and software

About Rev. Piotr Skarga Primary School

This non-public, Catholic primary school was established in Warsaw in 2002 and is part of the Catholic Education Complex named after Rev. Piotr Skarga. There are a total of 312 pupils enrolled in years 0-IV.

Challenge

Rev. Piotr Skarga Primary School is a non-public Catholic primary school located in Warsaw (Poland) that, as part of an expansion project, completed building a new wing in August 2021. The school board wished to boost the attractiveness of the school to accommodate increasingly tech-savvy parents. As a result, the school was looking to fit its 13 new classrooms with state-of-the-art EdTech solutions that would sustain the passage of time.

In search of more than just hardware, they wanted their school to have a complete education ecosystem. In particular, they needed this ecosystem to facilitate hybrid and remote learning, which has recently become a new challenge for teachers. The software component also needed to provide educators with more interactive tools for lesson planning and be engaging and easy to use with young students from classes I to IV.

Although the school board already planned on hiring a team of young teachers who are familiar with new technology, it was looking for training support to ensure that all educators could independently operate and use the solution to its full potential.

ViewBoard 50-3 Series

The ViewBoard® IFP50-3 Series offers a robust digital whiteboarding experience that supports Rev. Piotr Skarga Primary School by offering support for young students to interact with technology in the classroom.

Solution

ViewSonic teamed-up with Projekcja Spółka z o.o., one of its long-standing partners in the region, to conceptualize an integrated solution to support Rev. Piotr Skarga Primary School. With this collaboration, ViewSonic was able to meet its objective to create the best possible conditions for the students, both in class and online.

A complete ecosystem for education

Each classroom was equipped with a 55" 4K ViewSonic [IFP6550-3 ViewBoard](#). These interactive displays offer a large screen surface catering to group activities while allowing teachers to incorporate online resources within their lessons. It is also completely integrated with myViewBoard software.

Tools designed for teaching

[Whiteboard](#), one of the myViewBoard apps that is directly built-into the ViewBoards, provides teachers with an infinite canvas for interactive and uninterrupted lessons. They can integrate any online resource thanks to the LAN and Wi-Fi connectivity, and all class content can easily be shared with students, so that even if they are learning remotely, they can feel as if they were in the same classroom.

Support and durability

To guarantee that the school would be able to use the solution for years to come, ViewSonic offered an extended 5 year-warranty on the hardware and provided the staff with complete training for both the devices and the myViewBoard software.

Results

After implementing the complete solution on time for the grand opening of Rev. Piotr Skarga Primary School's new wing, the staff was pleased to observe a direct positive impact on both teachers and students.

Improved and enhanced focus

Teachers noticed a direct improvement in the students' attention and engagement. The children responded extremely well to the online resources brought into the lessons (such as educational videos or games), which add more variety to the classes. The interactive features facilitated improved interactions between educators and the class, ensuring a better balance of active and passive learning for the students, which ultimately results in better focus throughout the day.

Fully operational remote and hybrid learning

Integrating more online resources in class has resulted in more effective hybrid learning. Teachers can directly display and work with the Oxford and Cambridge Publishers' resources. They can also display and refer to students' handbooks, enabling more direct feedback. What's more, teachers noticed improved continuity and flow in classes, regardless of whether the students learn in-person or remotely.

Quick adaptation to hardware and software

Thanks to ViewSonic's training, teachers who were previously very uncertain about using this technology quickly became self-assured. They felt comfortable using and integrating technology in their lessons. Despite their young age, the students were all familiar with technology and instinctively adapted to using it. The additional activities heightened motivation during class time.

About ViewSonic

ViewSonic has been an audio-visual leader worldwide for more than three decades. We firmly believe that we can partner with educators to achieve sustainable success and better learning outcomes.

Our considerable experience has taught us a great deal about the real-life challenges and needs of people we work with.

We are dedicated to shaping the future of the educational landscape by solving real problems. Through innovation, great products, and people orientated services, we promise to find the answers together.
