

Manager  **EDLA**

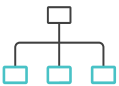

Strengthening Cybersecurity

Behind the scenes, ViewSonic EDLA-Certified solutions work seamlessly with ViewSonic Manager to give IT teams powerful tools to enhance operational efficiency and school-wide digital security. With more direct control of network devices, teams can work faster, reduce disruptions, and stay focused on strategy—not troubleshooting.

Campus-Wide Cyber Readiness

ViewSonic Manager lets IT teams remotely broadcast multimedia-based cybersecurity training to every connected display across campus. Whether it's app safety, password hygiene, or malware defense, content reaches students and staff wherever they are.

Granular Access, Maximum Control

With ViewSonic Manager, customizable role assignments give IT teams precise control over who can manage what—from enabling apps to adjusting profile settings. Clearly defined responsibilities help ensure sensitive systems stay protected, and critical configurations remain untouched.

Automated Security Updates

Built-in update automation ensures that devices remain current and secure, blocking unauthorized access and firmware tampering. Rollback protection adds another layer of defense, ensuring attackers can't revert to vulnerable OS versions.

Trusted Apps, Verified Access

Google Play Protect integration acts as a gatekeeper, allowing only verified apps to run on school devices. This layer of app validation reduces exposure to malicious or suspicious software, strengthening overall network security.
