

Westlink International School Strengthens Student-Based Learning with ViewSonic

“Joining the Future School Program strengthens our mission to bring modern IT into classrooms and provide students with inspiring learning experiences that build essential future skills.”

— **Hillary Hinchliff**
Principal, Westlink International School

Westlink International School

- **Location:** Hanoi, Vietnam
- **Interviewee:** Hillary Hinchliff, Principal
- **Industry:** Education

Challenge

1. **Lack of seamless classroom technology** to support inquiry-based, IB-style learning.
2. **Limited infrastructure for interactive teaching** and student collaboration.
3. **Insufficient data-driven tools** to support teaching differentiation and formative feedback.

Solution

1. **ViewBoard IFP7534 interactive displays** enabled dynamic lesson delivery with real-time student input.
2. **The myViewBoard platform** supported both in-person and remote instruction with cloud-based collaboration.
3. **Manager Advanced software** allowed IT teams to monitor and manage devices across campus remotely.

Result

1. **Improved student engagement** through interactive, visual, and hands-on learning.
2. **Empowered educators** with intuitive tools to personalize and manage lessons.
3. **Boosted digital literacy and independence** in students across all levels.

Westlink International School

The Signing Ceremony of the Future School MOU

Background

Westlink International School (WIS) is a distinguished educational institution in Hanoi, Vietnam, offering a comprehensive, globally recognized curriculum. As an authorized International Baccalaureate (IB) World School for the Primary Years Program, it is committed to delivering high-quality, challenging, and international education. The school is a candidate for the Middle Years Program and Diploma Program, aiming to provide IB education across all grade levels.

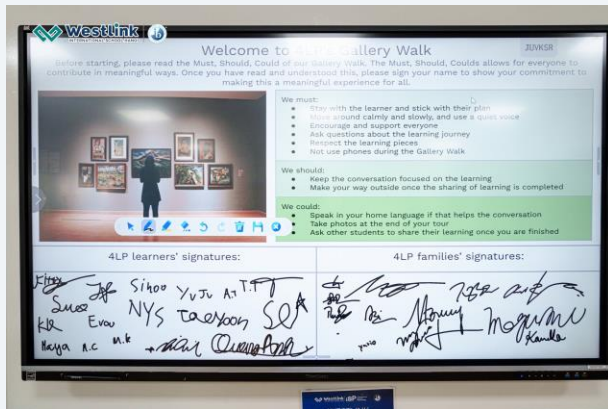

WIS is also a member of the International Schools Partnership, a global network of over 70 schools across more than 20 countries. Each delivers a top-tier, inquiry-based education within a diverse and inclusive community, equipping students for global citizenship and lifelong success.

Challenge

In implementing its digital transformation to align with modern teaching standards, Westlink International School faced several critical pedagogical challenges. First, standard displays were no longer sufficient to support the dynamic, student-centric, and inquiry-based learning that lies at the heart of the IB framework. Additionally, the school lacked a unified digital workspace to facilitate real-time, seamless collaboration among student groups across both physical and digital environments. Finally, the absence of intuitive tools prevented teachers from quickly capturing formative feedback and learning insights, which in turn hindered their ability to design differentiated instruction and effectively support diverse learners.

Interactive Classroom with ViewBoard IFP7534

Solution

ViewSonic collaborated closely with Westlink International School to deploy a holistic educational technology suite tailored to the requirements of an IB World School:

- 1. ViewBoard IFP7534:** Ultra HD, highly responsive multi-touch panels transform traditional teacher-led boards into interactive zones where students could present, annotate, and brainstorm actively.
- 2. myViewBoard:** A comprehensive educational platform connecting physical and digital learning. Teachers design rich interactive materials, integrate cloud drives, and coordinate immersive classroom activities effortlessly.
- 3. Manager Advanced:** A robust, centralized tool that allows the school's IT team to remotely access, monitor, and update campus displays.
- 4. ViewSonic Professional Development Program:** Structured learning for educators that includes comprehensive, hands-on training to ensure successful digital adoption. It empowers WIS teachers to confidently master interactive pedagogy, leverage advanced software features, and integrate digital tools seamlessly into their daily IB lesson planning.

Westlink International School Strengthens Student-Based Learning with ViewSonic

Lessons become more engaging and exciting for students.

Collaboration among teachers has become more visual and intuitive, allowing them to share resources and co-design lessons with greater ease.

Result

Integrating ViewSonic Education Solutions has elevated learning across Westlink International School's classrooms.

The **ViewBoard IFP7534 displays** successfully align with the rigorous requirements of the IB Primary Years Program, Middle Years Program, and Diploma Program curricula, helping students cultivate essential future skills in research, self-management, and social learning.

Furthermore, **myViewBoard's interactive teaching tools** have helped foster strong student-centered agency. By shifting from passive listeners to active creators, students now leverage interactive tools for presentation, deep reflection, and peer evaluation.

On the operational side, the school has achieved enhanced IT agility through **device management with Manager software**. Its centralized dashboard management allow for effortless, campus-wide system configurations while minimizing disruptions to class.

Ultimately, this partnership with ViewSonic has firmly established Westlink International School as a modern EdTech pioneer in Vietnam's K-12 landscape.
