

## Increase Collaboration in Google Classrooms

### Challenge

You want to increase collaboration in your Google-based classrooms. Can an interactive flat panel help?

### Solution

ViewSonic® ViewBoard® interactive flat panel (IFP) displays were developed to deliver a seamless interface in Google-based Classrooms, making it easy for instructors to facilitate added classroom collaboration.

Built on a Google Android™ platform, ViewSonic ViewBoard lets users begin inking right out of the box. They're also the first interactive display solution to include several Google Classroom-specific features – including one-touch-to-Google Drive™ save – enabling instructors and students to easily create, interact with, save and share content using their familiar Google Classroom suite of applications.

To get started, simply activate the floating tool bar with ViewSonic's proprietary two-finger touch to select from 3 pen colors, then write or draw directly on top of any application, content, or web browser. Displayed content is immediately interactive and collaborative.

To save content to your Google Drive, just tap the cloud icon, name your file, click OK, and your on-screen content is saved directly to your class's Google Drive. Sharing is just as simple: Click your Google Drive, find the file, long press, then choose whether to share to student Drives or email a link. You can also choose to let students edit, comment on, or simply keep the file. Save your most-used configurations with quick-set defaults.

Develop resources easily with quick access to any Google Classroom app via the ViewBoard Windows tool, or use the integrated templates and customizable backgrounds to create your own content. Import virtually any type of document or media file and use integrated tools like Screen Recorder, Mind Map, Countdown Timer and more to help organize presentations and create timed quizzes, games and other materials.

What you'll need to increase collaboration in your Google-based classrooms:
