WRITING AND DRAWING FUNCTIONS FOR DISTANCE EDUCATION

Challenges

Online learning classrooms can be a challenge for teachers to prepare for. This is especially true for those not well versed in technology or who are more accustomed to a traditional classroom environment.

More often than not, the many devices needed to successfully manage an online classroom may feel more like a tangled bundle of cords rather than an answer to your problems. In a world full of different electronic devices, it's important to have reliable technology that is easy to manage and understand.

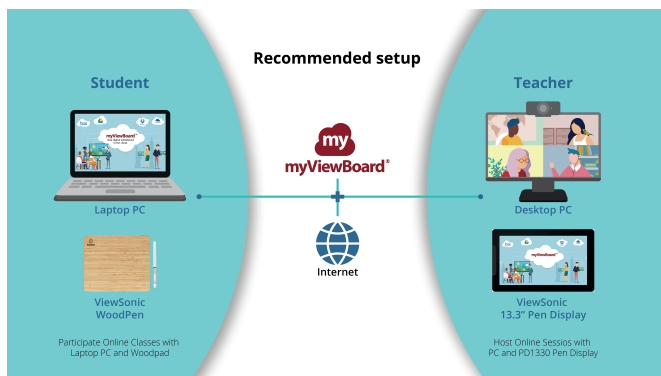

Solution

ViewSonic Digitizer and WoodPad

This is where ViewSonic's Digitizer whiteboard and WoodPad come into play. Both are designed for teachers and students looking for tools that are useful, efficient, and easy to understand, both devices were designed to allow educators and learners to create, teach, and learn to the best of their abilities.

A Type-C single cable connection provides an instant, two-way connection. Able to transmit both power and data through a single cable, users can cut down on wires and compatibility issues.

Furthermore, both devices offer unique advantages in terms of teachers and students. The Digitizer, for example, gives teachers the ability to easily share material and interact with their students from a second screen. While the WoodPad brings students back to what they are used to by reintroducing note taking, drawing, and writing to the digital classroom while keeping a traditional pen-on-paper feel.
