

## ViewSonic Solutions for Network Device Management

# MANAGING MULTIPLE DEVICES ON A SCHOOL NETWORK FROM ONE LOCATION

## Challenges

Not every teacher or administrator knows how to properly maintain a fleet of interactive flat-panel displays (IFPs) within a school's IT system. In fact, many IFPs are complex devices that require significant maintenance, security, and updating to keep current.

In some situations, there might not be someone on-site that can help, which is why it is important to have a system in place that makes it easy to update and perform regular maintenance on IFPs.

## Solution

### ViewSonic ViewBoard® and myViewBoard®

ViewSonic's ViewBoards are interactive flat panels with built-in hardware capabilities that allow them to work within a single network.

This enables system-wide updates, management, and maintenance to all connected devices from one central location. On the software side, myViewBoard has advanced administrator functions to control system-wide accounts, permissions, updates, and more.

ViewSonic® ViewBoard®

myViewBoard®
