ViewSonic®
**ViewBoard
IFP62 Series**

myViewBoard
MANAGER ADVANCED

Device management made easy.

Make the most of the ViewBoard® IFP62 interactive displays on your enterprise network by managing them from a single dashboard. With ViewSonic myViewBoard™ Manager, an easy-to-use web-based application, IT admins can securely manage and monitor displays and devices around the clock. The myViewBoard Manager app is free to use and includes standard features such as **Easy Device Enrollment, Remote Monitoring and Control, Cloud-Based Access, Push Content** and more.

But as operations become more complex with more devices, more requirements and more headaches, you may need a more powerful tool to help manage the devices on your enterprise network.

By upgrading from myViewBoard Manager to **myViewBoard Manager Advanced**, you'll be able to manage more devices in less time and enjoy a variety of premium features.

MULTIMEDIA BROADCAST
Broadcast pictures or videos to enrolled devices. This allows for more immersive messaging, announcements, and digital signage content than standard text broadcasts.

TASK SCHEDULING
Tasks can be planned for a specific time as a one-off event, or as a recurring event. Remotely schedule tasks such as screen on/off, power off, broadcast media and more on select devices.

USER MANAGEMENT
Manage user access to various features and devices. This allows you to easily maintain and control the different panel needs of various administrators and staff.

SYSTEM BACKUP AND RESTORE
Create "restore points" to restore system files to an earlier point in time. Restore points can be automatically created based on a preset schedule.
