DEVICE MANAGEMENT MADE EASY
myViewBoard Manager Advanced

As classrooms and meeting rooms evolve digitally, IT administrators are continually facing new challenges. One issue is the time-consuming need to monitor and maintain individual display panels across large organizations. With **myViewBoard™ Manager and Manager Advanced solutions**, IT administrators are empowered to securely manage and monitor devices 24/7, and will enjoy the following benefits:

CAMPUS COMMMUNICATION: Efficiently communicate with students, faculty, and staff by delivering notifications for school events, urgent messages and warnings, menu changes in the cafeteria and more.

CENTRALIZED CONTROL: Manage all your network devices from a single dashboard. Direct access allows you to install, delete, and update apps. You can send messages and notifications with the push of a button, or apply power-saving and security settings to devices. Tasks can also be easily automated with a job scheduler.

REMOTE ACCESS: Use a web-based interface to manage your network from any device. Never interrupt another vacation or meeting again with easy, device-agnostic access to your device network. Get all device and network data at your fingertips wherever - and however - you choose to work.

DEVICE METRICS AND INSIGHTS: Monitor your network of devices with the metrics that matter to you. myViewBoard Manager allows you to easily track usage across all of your registered devices. Know which users are active and which apps are the most popular. Limit waste with detailed reports on power and data usage.

BETTER SECURITY AND DATA PROTECTION: We take a proactive approach toward data security with built-in enterprise-grade 256 AES encryption on the AWS cloud platform. We continuously innovate and update our software to fit modern-day digital requirements. We also provide faster response times for any maintenance issues, saving you time and money.
