

Responsible Minerals Report

February 2023

Background Information

The purpose of ViewSonic's global efforts to promote Corporate Social Responsibility, as detailed within ViewSonic's Environmental Policy Statement, is to support the protection of human rights. ViewSonic strongly supports the Responsible Business Alliance ("RBA"), formerly the Electronic Industry Citizenship Coalition, and the Global e-Sustainability Initiative ("GeSI"). ViewSonic is also a member of their jointly-founded Responsible Minerals Initiative ("RMI"), formerly the Conflict Free Sourcing Initiative. We help our suppliers' source conflict-free minerals through the tools and resources developed by the RMI, including the Responsible Minerals Assurance Process ("RMAP"), formerly the Conflict-Free Smelter Program. In addition, the RMAP developed the Conflict Minerals Reporting Template ("CMRT") to standardize the collection and transfer of information through the supply chain regarding the mineral's country of origin and the identity of smelters and refiners being utilized. Our first-tier key suppliers are requested to disclose and timely update information on smelters and mines via CMRT. The suppliers are audited annually by an independent third party. Our procurement policy requires our suppliers to source for tantalum, tin, tungsten, gold (or "3TG") and cobalt/mica from facilities or smelters that have "conflict-free" designation from a reputable source, such as the RMI.

Reasonable Country of Origin Inquiry

ViewSonic conducts a Reasonable Country of Origin Inquiry ("RCOI") for Responsible Minerals that are included in our products by reviewing available resources such as bills of material, product specifications, design documents, and component management systems to make preliminary determination of Responsible Minerals content. Our Engineering and supply chain personnel participate and contribute to our knowledge of product material content. We determine if Responsible Minerals that are included in our products are Democratic Republic of the Congo or surrounding countries (the "Covered Countries") based on information we have received from our direct suppliers in the due diligence process. If the Responsible Minerals originate in the Covered Countries, we will determine if the minerals originate from sources which support the armed groups in the region.

ViewSonic conforms to OECD Due Diligence Guidance for Responsible Minerals Supply Chains:

Step 1: Establish Strong Company Management Systems

ViewSonic adopted a Responsible Minerals Sourcing Policy, which is available on our company website at <https://www.viewsonic.com/us/company/green/go-green-with-viewsonic/#minerals-policy>. ViewSonic expects the following from its suppliers:

- (a) Adopt a policy of responsible sourcing of minerals and pass this requirement through its supply chain;
- (b) Implement due diligence processes to support that policy;
- (c) Source materials from socially responsible suppliers; and
- (d) Complete and return the CMRT and all requested information to ViewSonic timely.

ViewSonic's Responsible Minerals Sourcing Policy sets forth a grievance mechanism for concerns and violations. Concerns or violations may be reported to ViewSonic's Sourcing Review Board. ViewSonic also established a management review committee to oversee ViewSonic's responsible minerals programs like TCO certification program. ViewSonic established a multi-disciplinary working group of supply-based compliance owners to implement ViewSonic's responsible minerals program under the oversight of the management review committee.

Step 2: Identify and Assess Risk in the Supply Chain

Each year, ViewSonic requests key suppliers to survey their supply chains for the mineral's country of origin and the identity of smelters and refiners being utilized. The suppliers are requested to return the CMRT before the end of calendar year. In 2022, ViewSonic identified 6 first-tier LCD Monitor suppliers, 3 Projector suppliers and 4 Commercial Display suppliers that may have incorporated one or more of the Covered Minerals. ViewSonic requested these suppliers to submit the CMRT, including all smelter/refinery information for any of the Covered Minerals contained in their products. ViewSonic had evidence to suggest that Covered Minerals included in its products may have originated in the Democratic Republic of Congo, or from an adjoining country, or are not from recycled or scrap sources. Therefore, in accordance with the OECD Rule, ViewSonic undertook due diligence measures on the source and chain of custody of Covered Minerals included in its products, as described below.

Due Diligence

Design of Due Diligence

ViewSonic designed its due diligence measures by managing RMI's database in conformance with the due diligence related steps of the Organization for Economic Co-operation and Development ("OECD") Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, as further set forth in the specific guidance for downstream companies contained in the supplements on tin, tantalum, tungsten, and gold (the "OECD Guidance").

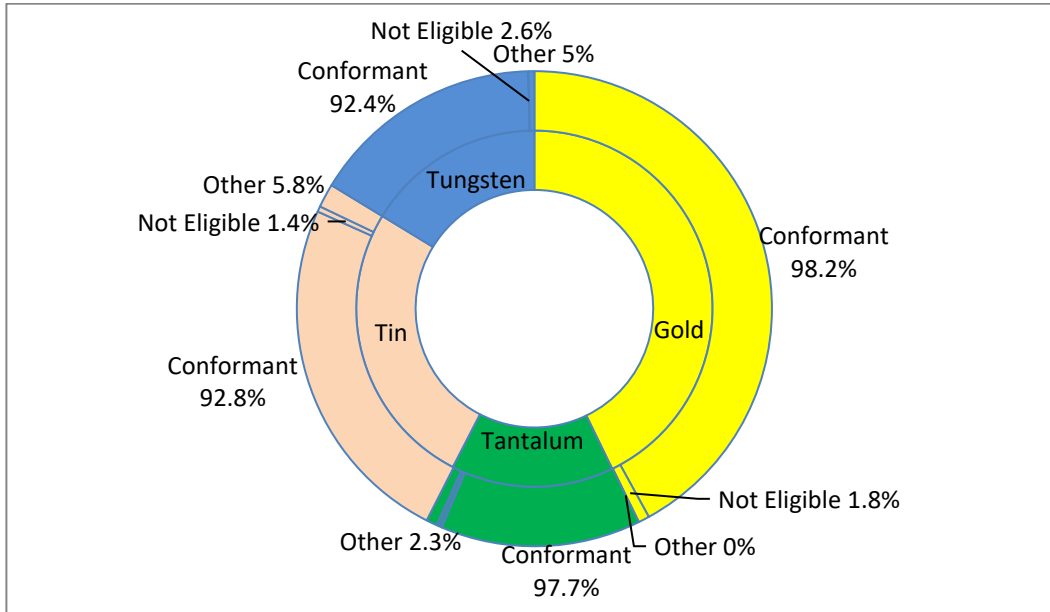

Due Diligence Measures Performed

Step 3: Design and Implement a Strategy to Respond to Identified Risks

ViewSonic identified acceptance criteria to be used when reviewing CMRTs submitted by suppliers and manufacturers. CMRTs that satisfied the acceptance criteria will be reviewed to compare the smelters/refiners identified against the list in the CFSP to assess whether the suppliers and manufacturers are using conflict-free smelters and refiners. And validate the smelters/refiners participation in OECD-aligned third party mechanisms from RMI ROCI data.

In 2022, we investigated the 264 supplier-reported 3TG facilities. The results from LCD Monitor supplier are as follows: 95.8% are 3TG compliant; 1.5% are non-eligible; 1.7% are others as provided in the Chart 1 below. Smelters and refiners of scrap metal are excluded from the calculation. From the result, most nonconformant smelters/refiners that reported in last year had been replaced as eligible ones. The new findings in this year are all coming from smelters' eligibility changes. For examples, smelters didn't meet RMAP's requirements during regular audits in 2022. And more facilities temporarily or permanently ceased operations due to market impacts of COVID-19. As usual, we helped our supplier to improve due diligence and find more sources for conformant smelters/refiners. It can be expected to maintain the good result in next coming year. The Appendix 1 to this Responsible Minerals Report lists the facilities identified by suppliers and manufacturers we surveyed.

Chart 1 – LCD Monitor 3TG Due Diligence Distribution

ViewSonic implemented follow-up procedures with suppliers whose CMRT did not satisfy our expectations and acceptance criteria. In addition, ViewSonic also has an escalation procedure for suppliers and manufacturers who missed the CMRT submission deadline. Suppliers and manufacturers who missed the deadline would receive adverse rating and/or corrective actions.

Comparing to year 2021, the conformant smelter rate is improved from 95.5% to 95.8%, non-eligible smelter rate is decreased from 2.8% to 1.5%, and others (Not applicable, operation ceased temporarily) is increased from 1.6% to 2.7%. Check Chart 2 below for year-over-year improvement progress.

Chart 2 – LCD Monitor 3TG Due Diligence KPI

To extend our Social Responsibility impacts, we started adding Projector and Commercial Display suppliers that are not in EPEAT/TCO program in 2022 due diligence. Followed the same practice that conducted in past years, Projector and Commercial Display suppliers have good results as LCD Monitors. Projector suppliers are 96.8% 3TG compliant; 1.6% are non-eligible; 1.6% are others as provided in the Chart 3. Commercial Display suppliers are 96.3% 3TG compliant; 3.7% are non-eligible as provided in the Chart 4.

Chart 3 – Projector 3TG Due Diligence Distribution

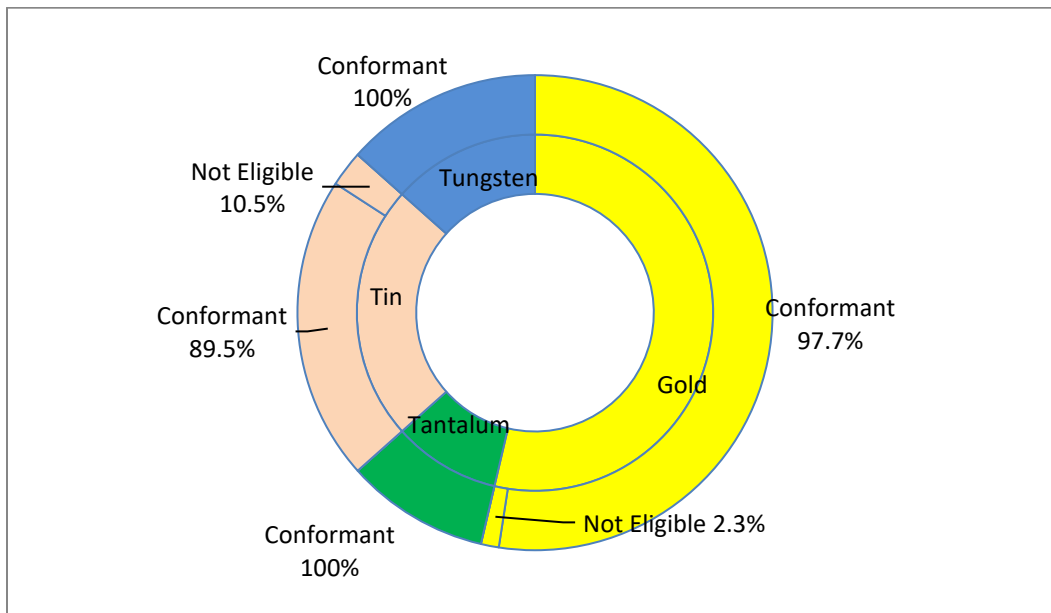

Chart 4 – Commercial Display 3TG Due Diligence Distribution

Step 4: Support the Development and Implementation of Independent Third-Party Audits

As stated with the “Background Information,” ViewSonic supports an industry-wide initiative to perform independent third-party audits of the due diligence and procurement activities of smelters and refiners. We have been a participating member with the CFSI since 2016.

<http://www.responsiblemineralsinitiative.org/about/members-and-collaborations/>

Step 5: Report Annually on Supply Chain Due Diligence

ViewSonic publishes the Responsible Minerals Report on its home website annually at

<https://www.viewsonic.com/us/company/green/go-green-with-viewsonic/#minerals-policy>.

Cobalt and Mica

Beginning in 2019, ViewSonic started incorporating cobalt into investigation program beyond 3TG. Cobalt is widely used in lithium-ion batteries but rare in our display products except some part dyeing process. In 2022, the Responsible Minerals Initiative (RMI) released a new Extended Minerals Reporting Template (EMRT) to include Mica in data collection. Followed OECD Due Diligence Guidelines for cobalt/mica due diligence processes, roughly 95.8 percent of the cobalt we use comes from eligible smelters. The only one mica smelter reported by Projector supplier is eligible.

Determination

ViewSonic has been a participating member of the CFSI since 2016. The CMRT requirement, our due diligence measures, our Responsible Minerals Sourcing Policy, and the Sourcing Policy for Conflict Minerals constitute the most reasonable efforts ViewSonic demonstrated to determine the mine or location of origin of Covered Minerals in our supply chain.

The Appendix 1 of the Responsible Minerals Report lists the facilities identified by suppliers and manufacturers we surveyed. Not all facilities have processed Covered Minerals for our 2022 products. Our suppliers and manufacturers provided facility information via the CMRT at the company level, which does not limit their CMRT responses to facility information for Covered Minerals in products they supply to ViewSonic specifically. The suppliers and manufacturers who identified the countries of origin of Covered Minerals in their products are listed on Appendix 2 of the Conflict Minerals Report.

Suppliers or manufacturers who identified a Covered Country as the country of origin for Covered Minerals identified processing facilities for such Covered Minerals. They are either verified as CFSP compliant (or have received a “conflict-free” designation from another independent third party audit program) or are in an audit process. ViewSonic found no reasonable basis to conclude these Covered Minerals facilities directly or indirectly finance or benefit the armed groups.

Risk Mitigation and Future Due Diligence Measures

ViewSonic is continuously improving its due diligence measures:

- a. Continue to make enhancements to our supplier training program based on the most common non-acceptance criteria from supplier responses.
- b. Continue to train relevant ViewSonic employees on the requirements of the OECD Rule and ViewSonic’s Conflict Minerals Policy.

- c. Continue to drive our suppliers to obtain current, accurate, and complete information about the smelters and refineries of Covered Minerals in their supply chains so that they in turn can report accurate and complete information to ViewSonic.
- d. Continue to support the CFSI and encourage suppliers to transition their supply chains to CFSP compliant sources of Covered Minerals.
- e. Consider alternative sources of products if we determine that a supplier with any Covered Minerals that directly or indirectly finance or benefit an armed group in a Covered Country.

Appendix 1

Metal	Smelter Name
Gold	Advanced Chemical Company
Gold	Aida Chemical Industries Co., Ltd.
Gold	Agosi AG
Gold	Almalyk Mining and Metallurgical Complex (AMMC)
Gold	AngloGold Ashanti Corrego do Sitio Mineracao
Gold	Argor-Heraeus S.A.
