

Responsible Minerals Report

February 2026

Background Information

The purpose of ViewSonic's global efforts to promote Corporate Social Responsibility, as outlined in ViewSonic's Environmental Policy Statement, is to uphold the protection of human rights. ViewSonic strongly endorses the Responsible Business Alliance ("RBA"), formerly known as the Electronic Industry Citizenship Coalition, and the Global e-Sustainability Initiative ("GeSI"). ViewSonic is also an active member of their jointly-founded Responsible Minerals Initiative ("RMI"), formerly known as the Conflict Free Sourcing Initiative. We assist our suppliers in sourcing conflict-free minerals by utilizing the tools and resources developed by the RMI, including the Responsible Minerals Assurance Process ("RMAP"), previously known as the Conflict-Free Smelter Program. Additionally, the RMAP has introduced the Conflict Minerals Reporting Template ("CMRT") to standardize the collection and transfer of information throughout the supply chain regarding the mineral's country of origin and the identity of smelters and refiners being utilized. Our first-tier key suppliers are requested to disclose and promptly update information on smelters and mines via CMRT. These suppliers undergo annual audits conducted by an independent third party. Our procurement policy mandates that our suppliers source tantalum, tin, tungsten, gold (or "3TG"), and cobalt only from facilities or smelters that have a "conflict-free" designation from a reputable source, such as the RMI.

Reasonable Country of Origin Inquiry

ViewSonic conducts a Reasonable Country of Origin Inquiry ("RCOI") for Responsible Minerals included in our products by reviewing available resources such as bills of material, product specifications, design documents, and component management systems to make a preliminary determination of Responsible Minerals content. Our engineering and supply chain personnel actively participate and contribute to our understanding of product material content. We ascertain whether Responsible Minerals included in our products originate from the Democratic Republic of the Congo or surrounding countries (the "Covered Countries") based on information received from our direct suppliers during the due diligence process. In cases where Responsible Minerals originate in the Covered Countries, we further investigate to determine if these minerals come from sources that support armed groups in the region.

ViewSonic conforms to OECD Due Diligence Guidance for Responsible Minerals Supply Chains:

Step 1: Establish Strong Company Management Systems

ViewSonic adopted a Responsible Minerals Sourcing Policy, which is available on our company website at <https://www.viewsonic.com/us/company/green/go-green-with-viewsonic/#minerals-policy>.

ViewSonic expects the following from its suppliers:

- (a) Adopt a policy of responsible sourcing of minerals and pass this requirement through its supply chain;
- (b) Implement due diligence processes to support that policy;
- (c) Source materials from socially responsible suppliers; and
- (d) Complete and return the CMRT/EMRT and all requested information to ViewSonic timely.

ViewSonic's Responsible Minerals Sourcing Policy outlines a grievance mechanism to address concerns and violations. Individuals can report concerns or violations to ViewSonic's Sourcing Review Board. Additionally, ViewSonic has instituted a management review committee tasked with overseeing responsible minerals programs, including the TCO certification program and EPEAT desk reviews. To implement ViewSonic's responsible minerals program effectively, a multi-disciplinary working group comprising supply-based compliance owners has been established. This working group operates under the oversight of the management review committee.

Step 2: Identify and Assess Risk in the Supply Chain

Annually, ViewSonic requests key suppliers to survey their supply chains for information on the country of origin of minerals and the identity of smelters and refiners being utilized. Suppliers are asked to submit the Conflict Minerals Reporting Template (CMRT) and EMRT (Extended Minerals Reporting Template) before the end of the calendar year. In 2025, ViewSonic identified 6 first-tier and 2 second-tier LCD Monitor suppliers, 4 Projector suppliers, and 3 Commercial Display suppliers that may have incorporated one or more of the Covered Minerals. As usual, we are actively encouraging suppliers to source smelter and refinery facilities from 100% recycled or scrap material. These suppliers have been requested to submit the CMRT/EMRT, including all smelter/refinery information for any of the Covered Minerals contained in their products. ViewSonic obtained evidence suggesting that Covered Minerals included in its products may have originated in the Democratic Republic of Congo, an adjoining country, or are not from recycled or scrap sources. Therefore, in compliance with the OECD Rule, ViewSonic implemented due diligence measures on the source and chain of custody of Covered Minerals included in its products, as described below.

Due Diligence

Design of Due Diligence

ViewSonic has structured its due diligence measures by effectively managing the Responsible Minerals Initiative's (RMI) database, aligning with the due diligence steps outlined in the Organization for Economic Co-operation and Development's (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas. This alignment is further detailed in the specific guidance for downstream companies, as provided in the supplements on tin, tantalum, tungsten, and gold (the "OECD Guidance").

Due Diligence Measures Performed

Step 3: Design and Implement a Strategy to Respond to Identified Risks

ViewSonic has established acceptance criteria for the review of Conflict Minerals Reporting Templates (CMRTs) and Extended Minerals Reporting Template (EMRTs) submitted by suppliers and manufacturers. The most recent CMRT template version, v6.5, and EMRT template version, v.21, are employed in the 2025 program. CMRTs/EMRTs that meet the acceptance criteria undergo a thorough examination to cross-reference the identified smelters/refiners with the list in the Conflict-Free Smelter Program (CFSP). This assessment is conducted to ensure that suppliers and manufacturers are utilizing conflict-free smelters and refiners. Additionally, the validation process involves confirming the participation of smelters/refiners in OECD-aligned third-party mechanisms using RMI ROCI data.

In 2025, we conducted an investigation into the 225 supplier-reported 3TG facilities. The results from LCD Monitor and Commercial Display suppliers are as follows: 95.6% are 3TG conformant and active, and 4.4% are non-conformant, as illustrated in Chart 1 below. ViewSonic continuously requires its suppliers to enhance their compliance with conflict minerals. During our due diligence process, if we discover that a supplier is using mineral sources deemed non-conformant by the Responsible Minerals Initiative (RMI), we immediately notify the supplier. Typically, suppliers complete the necessary changes within four to six months.

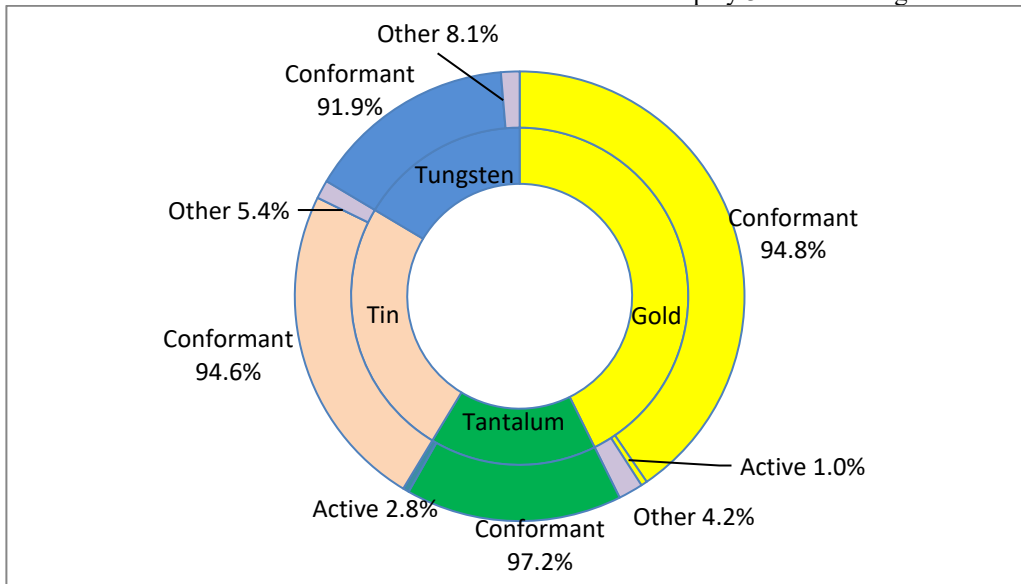

During 2025, compliance performance remained strong, with Tantalum reaching full compliance (100%), Gold at 95.8%, and Tungsten at 91.9%. Although the June 2024 cessation of multiple Tin smelters in Indonesia initially impacted the supply chain—rendering 12 smelters non-compliant—proactive remediation efforts by suppliers restored Tin compliance to 94.6% by year-end. The identified smelters for changes in status can be found in Appendix 3.

To promote circular economy, ViewSonic keeps encouraging suppliers to adopt 100% recycled or scrap material whenever possible, we have achieved a percentage of 100% recycled or scrap material in Gold (16.7%), Tantalum (2.7%), Tin (7.1%), and Tungsten (2.7%) in 2025. As part of our regular practice, we

assisted our suppliers in improving due diligence and finding additional sources for conformant smelters/refiners. This effort is expected to contribute to maintaining positive results in the upcoming year. For detailed information, please refer to Appendix 1 of this Responsible Minerals Report, which lists the facilities identified by the suppliers and manufacturers we surveyed.

Chart 1 – LCD Monitor and Commercial Display 3TG Due Diligence Distribution

ViewSonic has implemented follow-up procedures with suppliers whose Conflict Minerals Reporting Templates (CMRTs) and Extended Minerals Reporting Template (EMRTs) did not meet our expectations and acceptance criteria. Additionally, ViewSonic has established an escalation procedure for suppliers and manufacturers who fail to meet the CMRT/EMRT submission deadline. Those who miss the deadline will receive adverse ratings and/or corrective actions.

Chart 2 – LCD Monitor and Commercial Display 3TG Due Diligence KPI

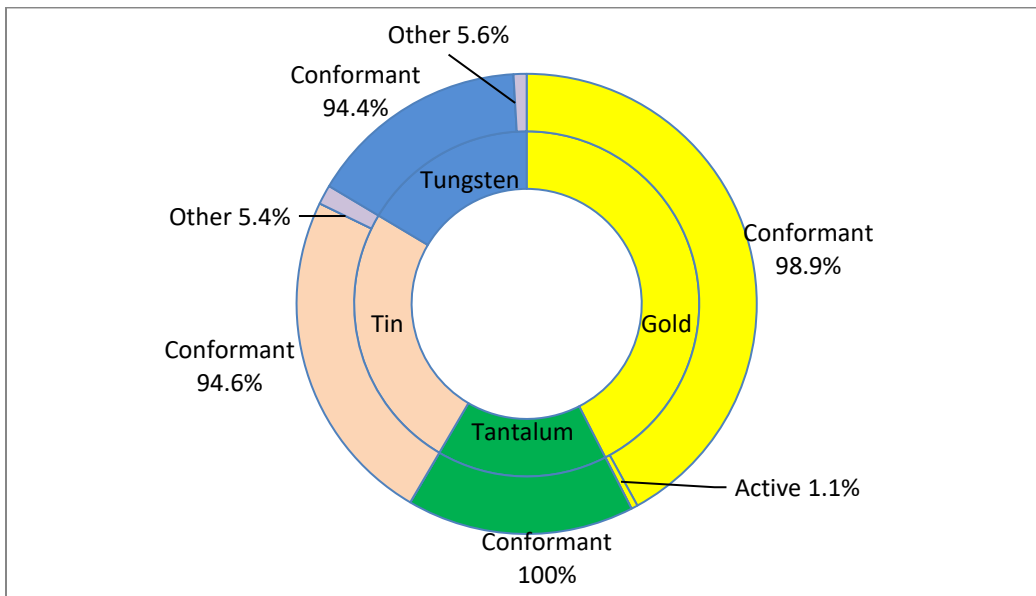

Chart 3 – Summary of 3TG Smelter Conformance Status

Conformance Smelters (RMAPO, RJC or LBMA)	213
Active Smelters (RMAPO, RJC or LBMA)	2
Nonconformant Smelters	10
Total Smelters	225
Percentage of Conformant and Active Smelters	94.67%

In 2025, Projector suppliers demonstrated commendable results similar to LCD Monitor and Commercial Display. Projector suppliers achieved a 97.7% 3TG compliance rate, with 2.3% being non-conformant, as detailed in Chart 3.

Chart 3 – Projector 3TG Due Diligence Distribution

Cobalt

Since 2019, ViewSonic has expanded its investigation program to include cobalt beyond the 3TG minerals. Although cobalt is widely used in lithium-ion batteries, it is relatively rare in our display products, mainly appearing in certain part dyeing processes. In 2025, the cobalt conformant rate reached 78.7%.

Conformant/Active Cobalt Smelters/Refiners	48
Recycled Cobalt Scrap Smelters/Refiners	0
Nonconformant Smelters/Refiners	13
Total Cobalt Smelters/Refiners	61
Percentage of Conformant, Active, and Recycled Scrap Smelters/Refiners	78.7%

Step 4: Support the Development and Implementation of Independent Third-Party Audits

As stated with the “Background Information,” ViewSonic supports an industry-wide initiative to perform independent third-party audits of the due diligence and procurement activities of smelters and refiners. We have been a participating member with the CFSI since 2016.

<http://www.responsiblemineralsinitiative.org/about/members-and-collaborations/>

Step 5: Report Annually on Supply Chain Due Diligence

ViewSonic publishes the Responsible Minerals Report on its home website annually at <https://www.viewsonic.com/us/company/green/go-green-with-viewsonic/#minerals-policy>.

Mica, Copper, Lithium and Nickel

In 2025, the Responsible Minerals Initiative (RMI) introduced a new Extended Minerals Reporting Template (EMRT v2.1) for Cobalt, Mica, Copper, Lithium and Nickel data collection. Following the OECD Due Diligence Guidelines due diligence processes, we have mica 62.5% compliance rate; copper 75.8% compliance rate; lithium 57.1% compliance rate; and nickel 72.7% compliance rate.

Determination

ViewSonic has been an active member of the Conflict-Free Sourcing Initiative (CFSI) since 2016. The requirement for Conflict Minerals Reporting Templates (CMRT), our due diligence measures, our Responsible Minerals Sourcing Policy, and the Sourcing Policy for Conflict Minerals represent the most reasonable efforts demonstrated by ViewSonic to determine the mine or location of origin of Covered Minerals in our supply chain.

Appendix 1 of the Responsible Minerals Report provides a list of facilities identified by the suppliers and manufacturers we surveyed. It's important to note that not all facilities processed Covered Minerals for our 2025 products. Suppliers and manufacturers provided facility information via the CMRT and EMRT at the company level, allowing them to include facility information for Covered Minerals in products supplied to ViewSonic specifically. Suppliers and manufacturers who disclosed the countries of origin of Covered Minerals in their products are listed in Appendix 2 of the Conflict Minerals Report. Those who identified a Covered Country as the origin for Covered Minerals also specified processing facilities for such minerals. These facilities are either verified as Conflict-Free Smelter Program (CFSP) compliant or have received a "conflict-free" designation from another independent third-party audit program or are currently undergoing an audit process.

ViewSonic has found no reasonable basis to conclude that these facilities processing Covered Minerals directly or indirectly finance or benefit armed groups.

Risk Mitigation and Future Due Diligence Measures

ViewSonic is continuously improving its due diligence measures:

- a. Continue to make enhancements to our supplier training program based on the most common non-acceptance criteria from supplier responses.
- b. Continue to train relevant ViewSonic employees on the requirements of the OECD Rule and ViewSonic's Conflict Minerals Policy.
- c. Continue to drive our suppliers to obtain current, accurate, and complete information about the smelters and refineries of Covered Minerals in their supply chains so that they in turn can report accurate and complete information to ViewSonic.
- d. Continue to support the CFSI and encourage suppliers to transition their supply chains to CFSP compliant sources of Covered Minerals.

- e. Consider alternative sources of products if we determine that a supplier with any Covered Minerals that directly or indirectly finance or benefit an armed group in a Covered Country.
