

ViewSonic Manager Meets EDLA-Certified Solutions

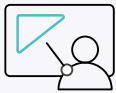

Built for the Classroom and Beyond

A Unified Solution for Educators and IT Departments

ViewSonic EDLA-Certified solutions work in harmony with ViewSonic Manager software to deliver engaging tools for educators and simple centralised controls for IT Departments. Purpose-built for education and integrated with Google Workspace for Education apps, this all-in-one solution provides an intuitive user experience—making teaching more efficient and device management smarter.

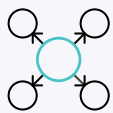

Why Choose This Solution?

Familiar Google Teaching Tools

Designed to fit naturally into daily classroom routines, this solution helps teachers get started faster and teach with confidence using the tools they love—no steep learning curves or hassle juggling logins.

Centralised IT Management

With the integrated ViewSonic Manager platform, IT Departments get full visibility and control over EDLA-Certified ViewSonic devices across their site, enabling quicker responses, smoother operations, and fewer disruptions.

Security That Never Sleeps

Security is built in at every level, with Google Play Protect and ViewSonic Manager working together to safeguard school data and devices. These behind-the-scenes features quietly reduce risk without disrupting the classroom experience.

Making Teaching Easier, Every Day

Technology should support teaching, not slow it down. That's why ViewSonic EDLA-Certified solutions integrate seamlessly with Google Workspace for Education tools—reducing friction and giving teachers confidence in the classroom. Plus with ViewSonic Manager, real-time support is just a click away. So when hiccups happen, they're handled instantly, helping educators stay calm, and in control.

What Teachers Get

Automated, Round the Bell Scheduling

ViewSonic Manager makes remote scheduling simple, allowing IT Departments to schedule power on/off times for every ViewBoard. This ensures displays are ready the moment teachers log in with their Google account—no delays or wasted energy.

Fast, Seamless Logins

When teachers begin a session, they can quickly and securely login to their previously signed-in Google accounts. With instant access to their cloud files, bookmarks, and saved Chrome passwords, they spend less time logging in and more time teaching.

Google Tools, Built Right In

With native access to Google Slides, Docs, and other Google Workspace for Education apps, teachers can create, and edit lessons using the tools they know best—no need for third-party apps with limited features or unfamiliar interfaces.

On-Demand IT Support

ViewSonic Manager's Remote Desktop function gives IT staff the power to step in instantly. Whether it's helping locate new apps and files or providing support, assistance can be delivered in real time—keeping classes running smoothly.

Strengthening Cybersecurity

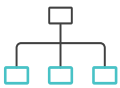

Behind the scenes, ViewSonic EDLA-Certified solutions work seamlessly with ViewSonic Manager to give IT teams powerful tools to enhance operational efficiency and school-wide digital security. With more direct control of network devices, teams can work faster, reduce disruptions, and stay focused on strategy—not troubleshooting.

What IT Teams Can Count On

Campus-Wide Cyber Readiness

ViewSonic Manager lets IT teams remotely broadcast multimedia-based cybersecurity training to every connected display across campus. Whether it's app safety, password hygiene, or malware defense, content reaches students and staff wherever they are.

Granular Access, Maximum Control

With ViewSonic Manager, customisable role assignments give IT teams precise control over who can manage what—from enabling apps to adjusting profile settings. Clearly defined responsibilities help ensure sensitive systems stay protected, and critical configurations remain untouched.

Automated Security Updates

Built-in update automation ensures that devices remain current and secure, blocking unauthorised access and firmware tampering. Rollback protection adds another layer of defense, ensuring attackers can't revert to vulnerable OS versions.

Trusted Apps, Verified Access

Google Play Protect integration acts as a gatekeeper, allowing only verified apps to run on school devices. This layer of app validation reduces exposure to malicious or suspicious software, strengthening overall network security.

ViewSonic Manager for EDLA-Certified Devices

Feature List

Category	Feature	Note
Remote Control	Screen On/Off	
	Switch Input Source	
	Volume Control	
	System Shutdown	
	Reboot & Factory Reset	
	App Install/Uninstall	
	App Management	Includes app enable/disable function Requires Advanced license
	Google App Hide/Unhide	
	Asset Tag Assignment	
	Backlight Control	
	Add WiFi SSID	
	Manage/Forget WiFi SSID	
	Mute/Unmute Device
